

# Open energy planning 'n' PyPSA meets Earth

06.04.2023

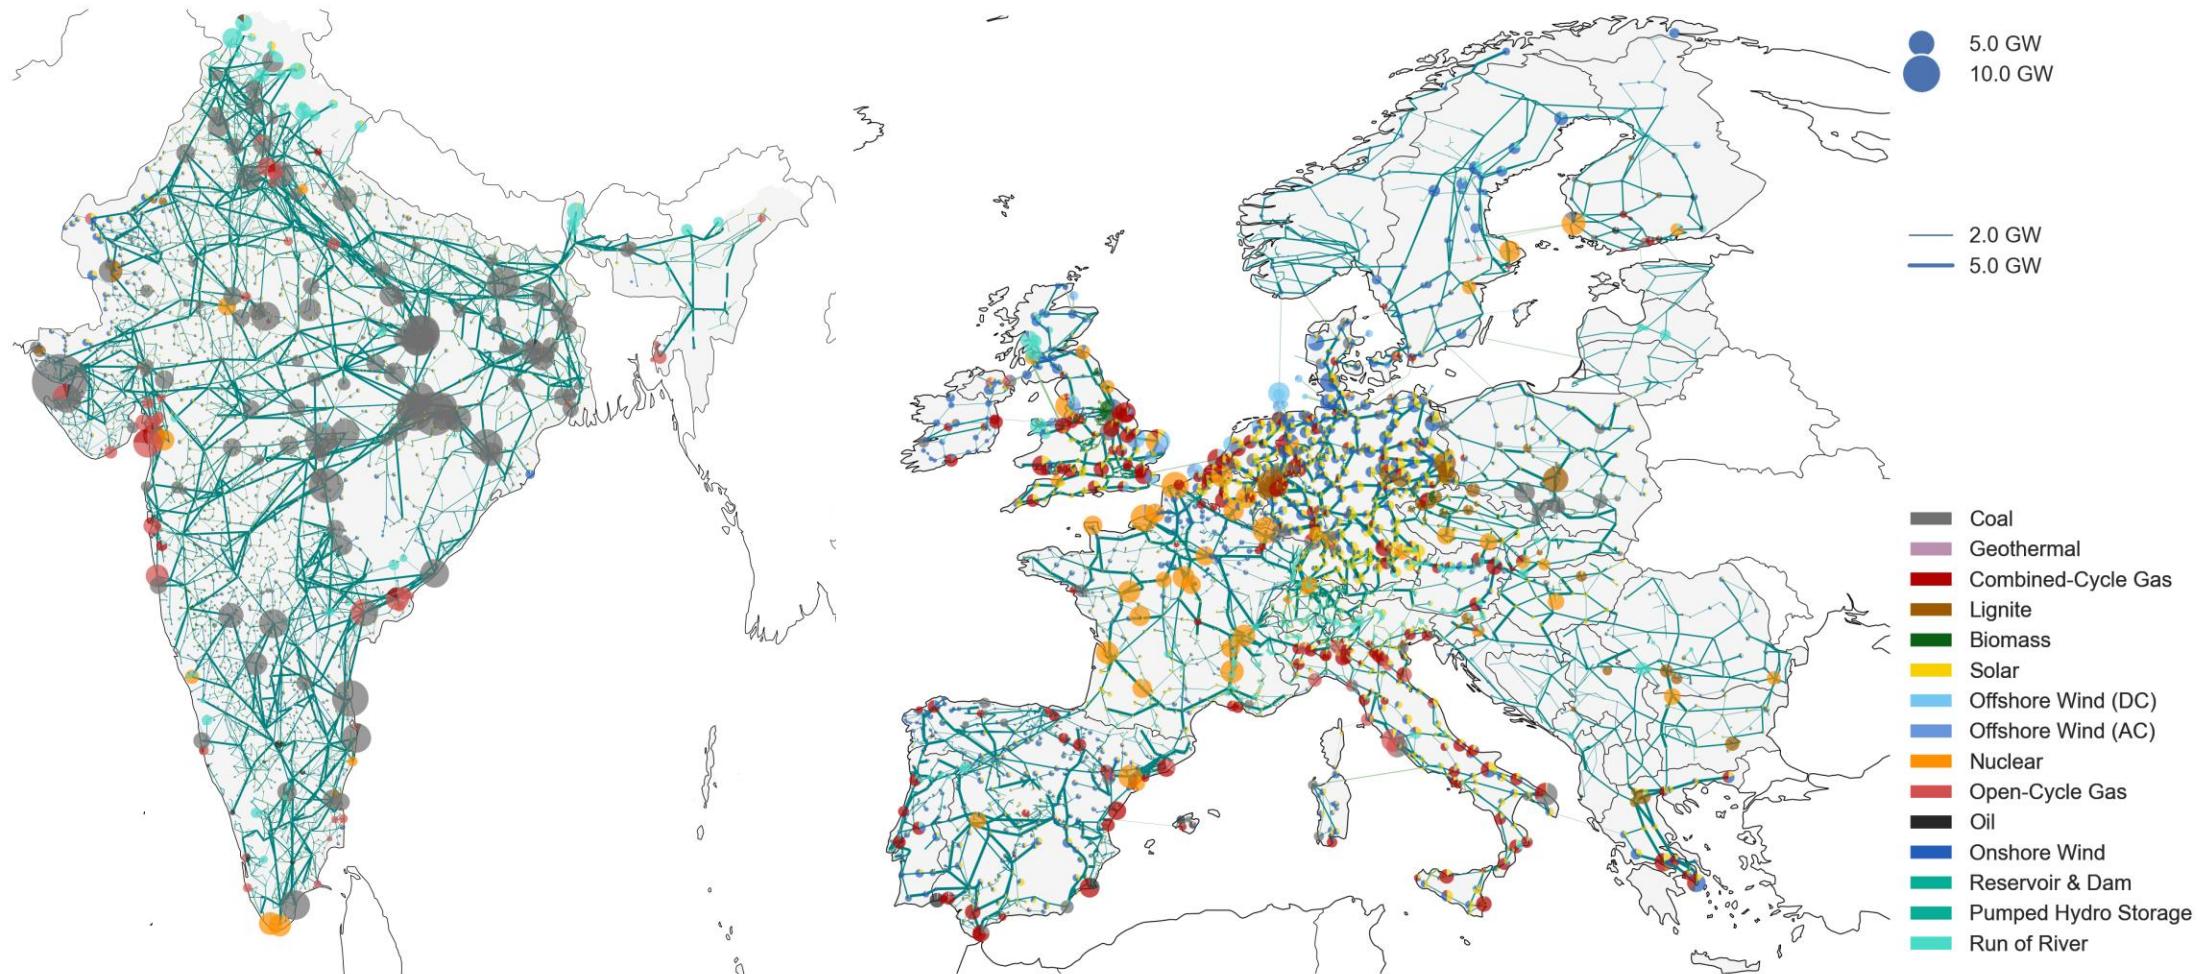

**Maximilian Parzen,  
Dr. Martha Frysztacki,  
Prof. Dr. Davide Fioriti**

# PART I. Open Energy Planning

# Digital Twins as Planning Foundations

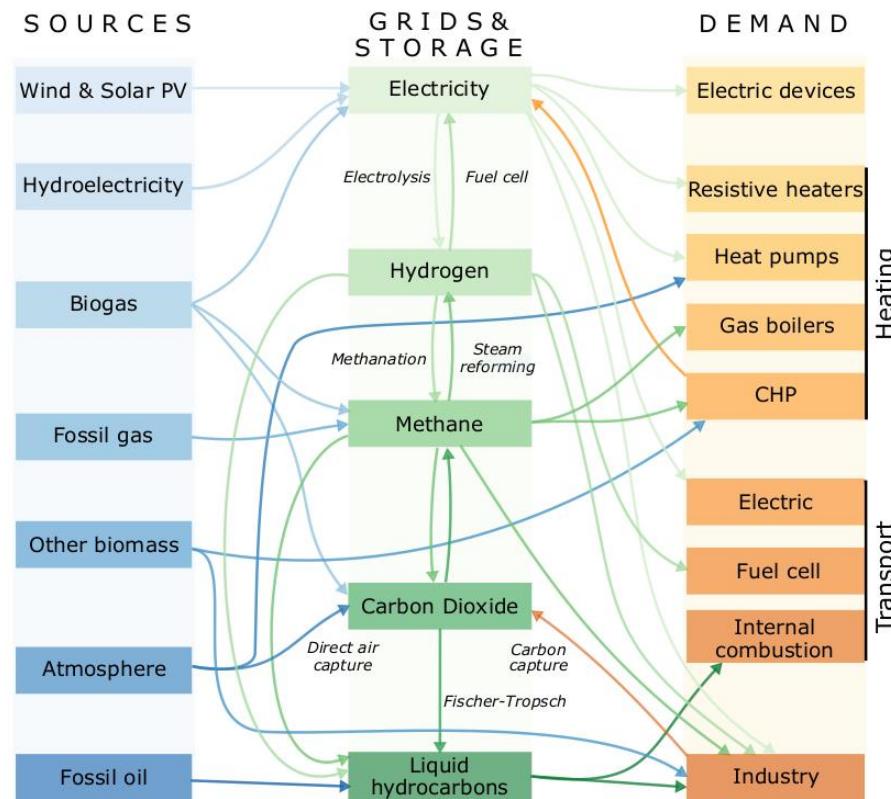

Own illustrations shared in: <https://forum.openmod.org/t/13-power-systems-around-the-world/3528>

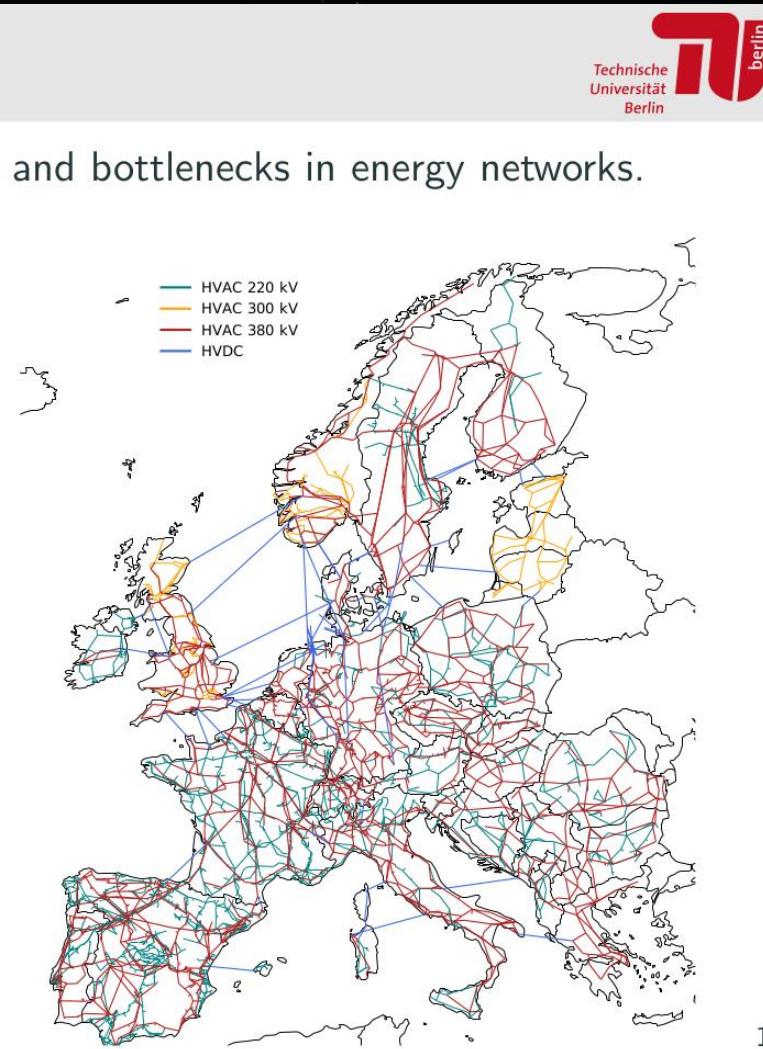

# What does these models include?

## What is PyPSA-Eur-Sec?

Model for Europe with all energy flows...

and bottlenecks in energy networks.

## Why Energy Modelling in Particular Need to be Open

What makes energy modelling special?

- Energy has **high social, political and economic relevance** (large positive role in economy, but also negative role in climate change, air pollution, resource conflicts)
- Large role of **business interests** in energy (hundreds of billions of euros spent each year in Europe on energy, much of it imported)
- Large **uncertainties about future** (technology cost & availability, acceptance, politics, geopolitics)
- Many **trade-offs beyond cost** (environmental impact, acceptance, political/social support, land use, industry relocation versus security, e-fuel imports)
- Need for **computer modelling** to avoid bad investment decisions (and save the planet)
- But results are **strongly driven by inputs and assumptions** (cost, demand, constraints)

## What is open modelling?

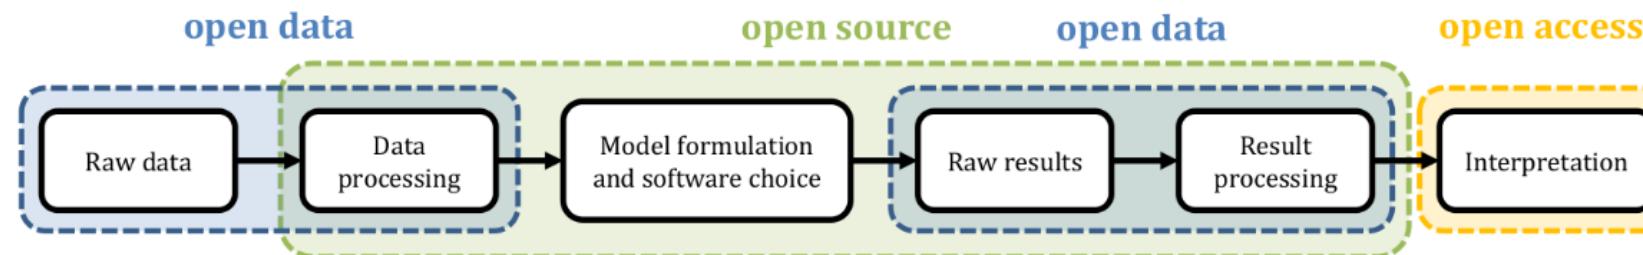

**Open energy modelling** means modelling with open software, open data and open publishing.

**Open** means that anybody is free to download the software/data/publications, inspect it, machine process it, share it with others, modify it, and redistribute the changes.

This is typically done by uploading the model to an online platform with an **open licence** telling users what their reuse rights are.

The **whole pipeline** should be open:

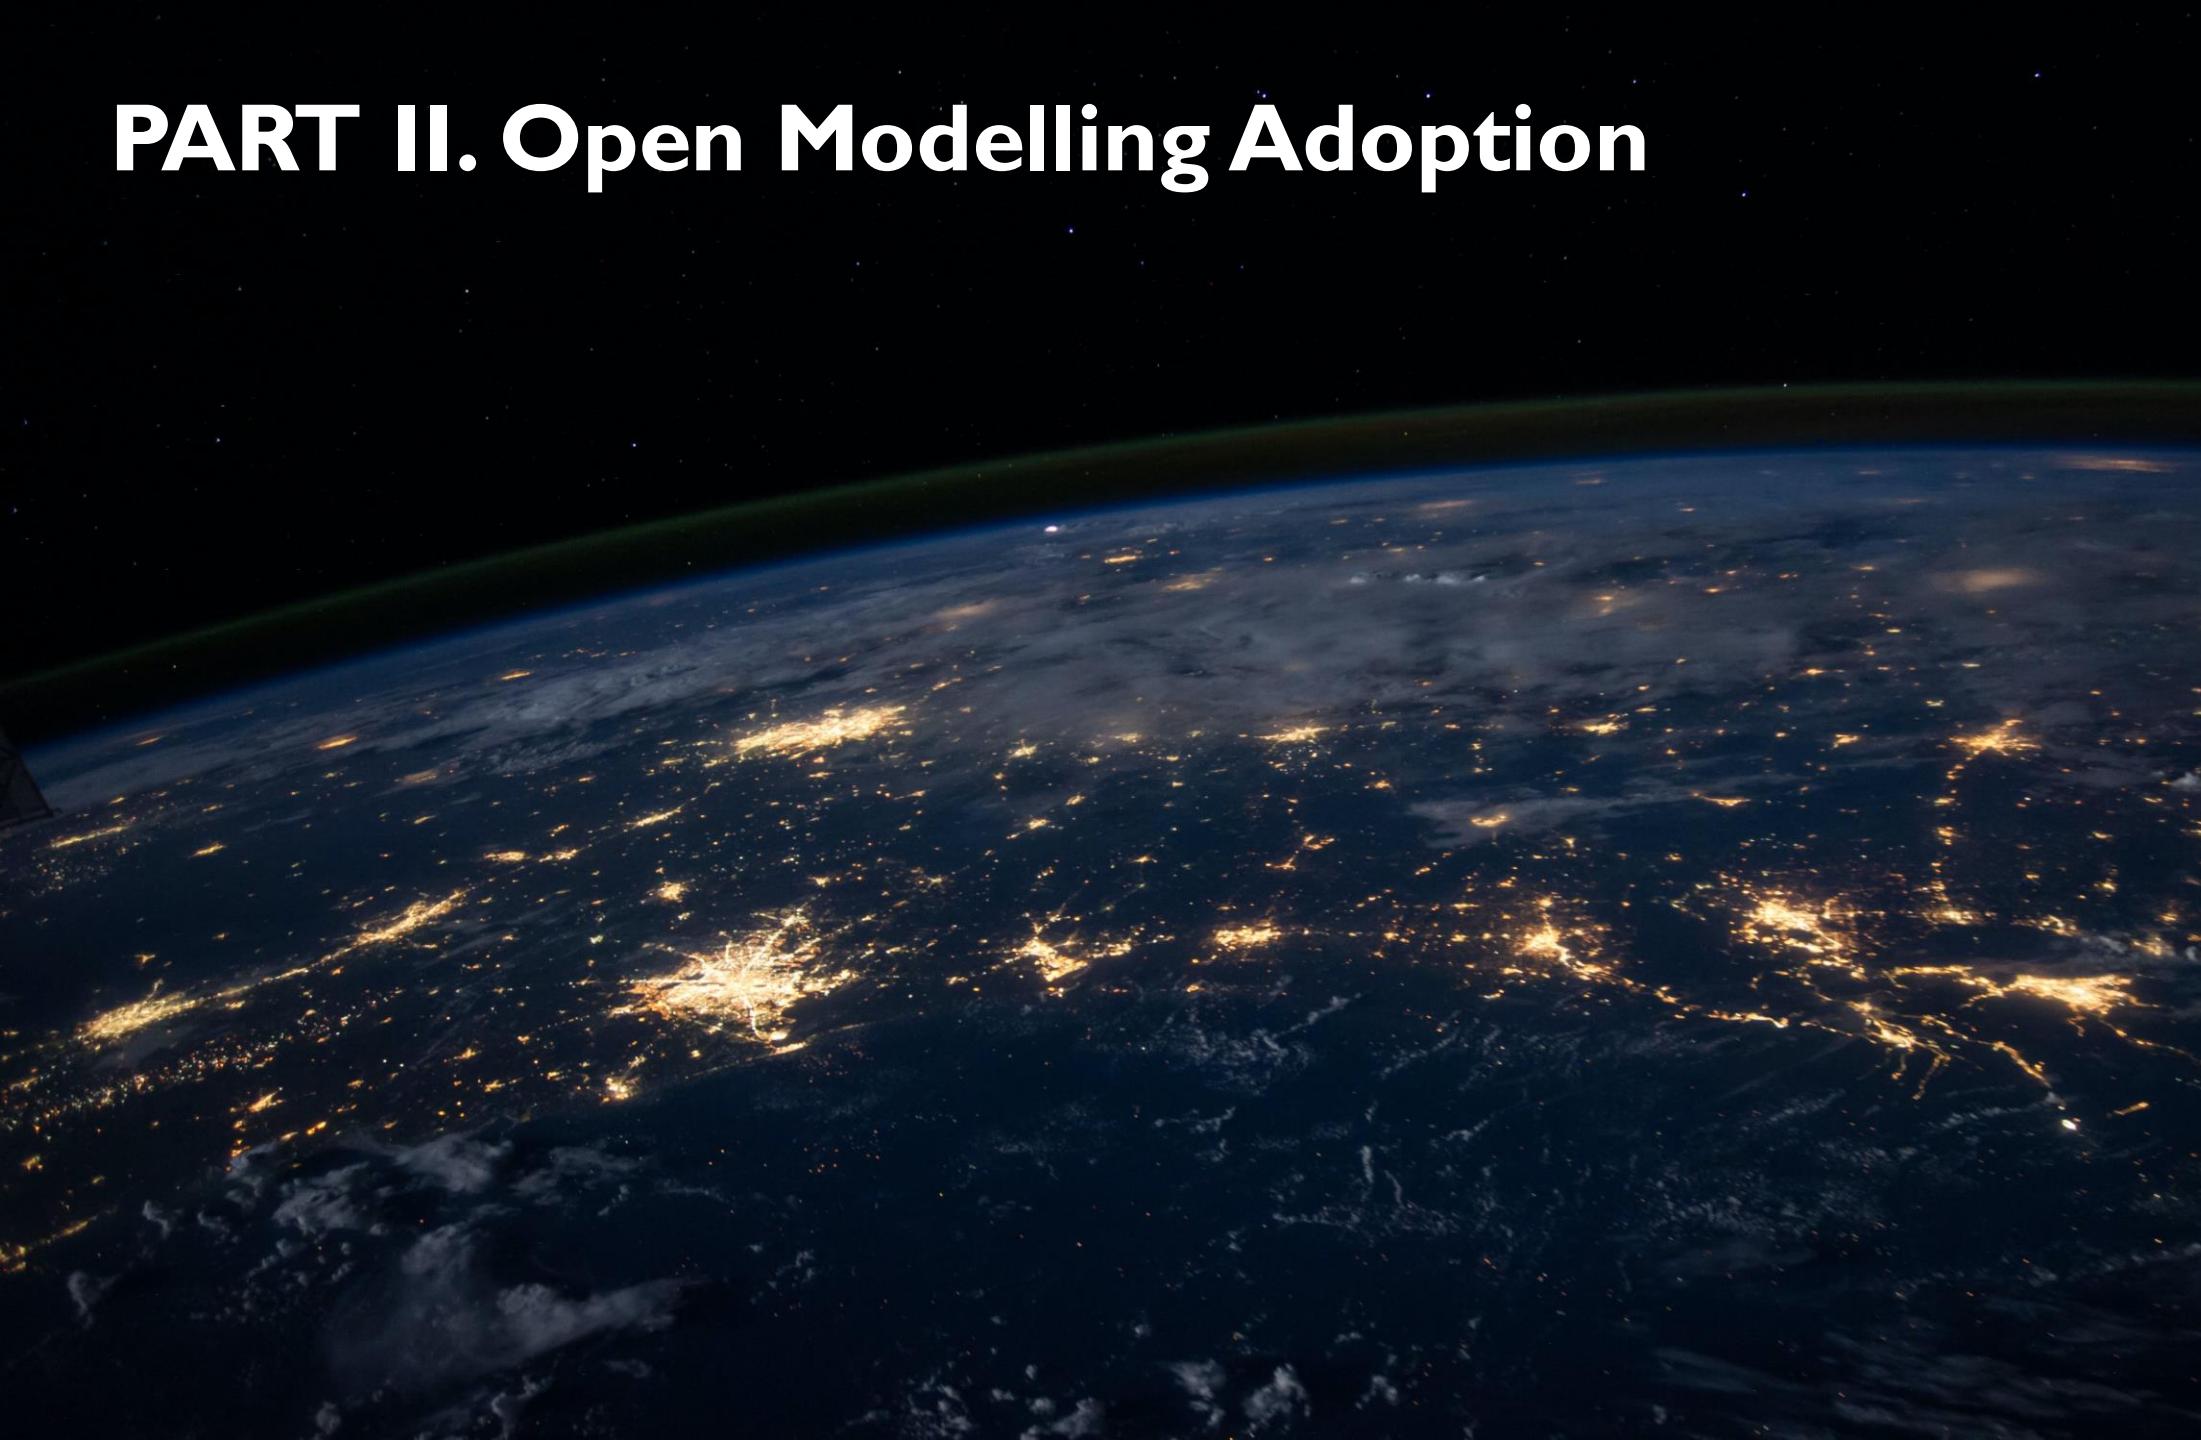

## How does openness and transparency help?

openness . . .

- increases **transparency, reproducibility** and **credibility**, which lead to better research and policy advice (no more 'black boxes' determining hundreds of billions of energy spending)
- reduces **duplication of effort** and frees time/money to develop **new ideas**
- allows a **high level of customisability** given code is open
- enables **new actors to participate in debate** (e.g. NGOs, researchers, public)
- *can* improve research **quality** through feedback and correction
- allows easier **collaboration** (no need for contracts, NDAs, etc.)
- is essential given the increasing **complexity** of the energy system - we all need data from different domains (grids, buildings, transport, industry) and cannot collect it alone
- can increase **public acceptance** of difficult infrastructure trade-offs

# PART II. Open Modelling Adoption

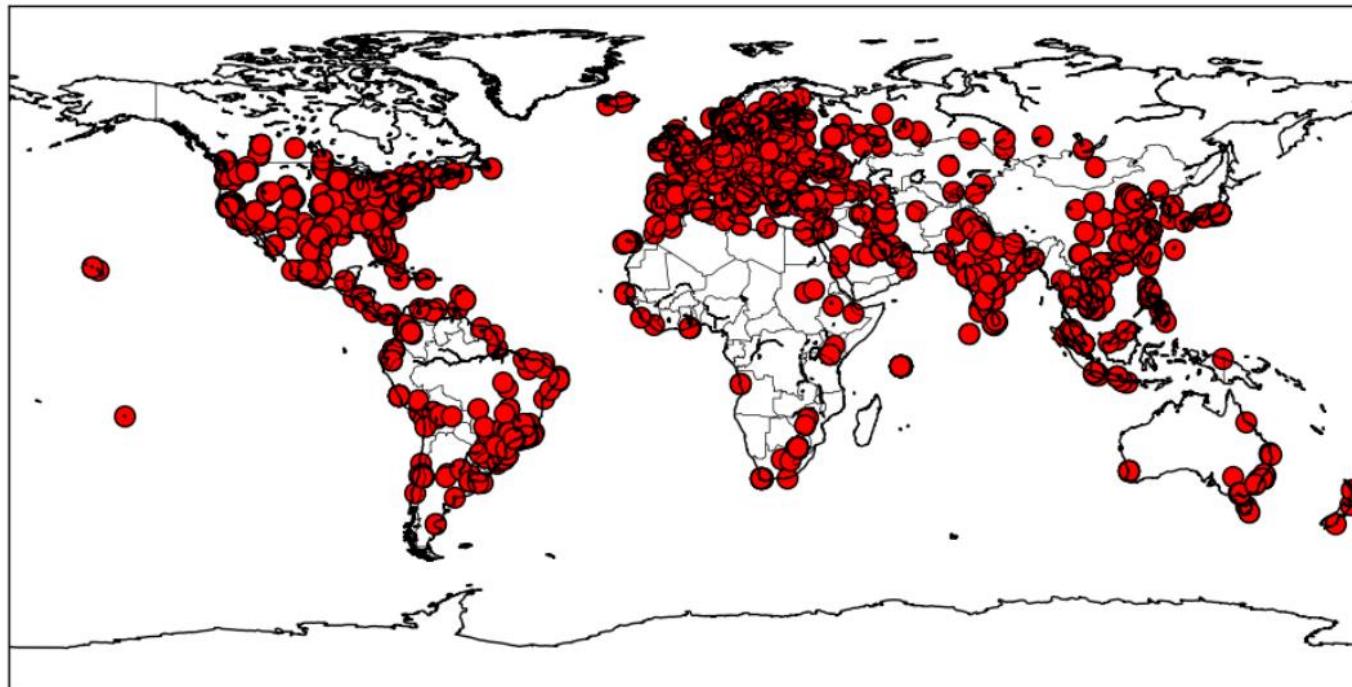

# WORLDWIDE ADOPTION

## Python for Power System Analysis: Worldwide Usage

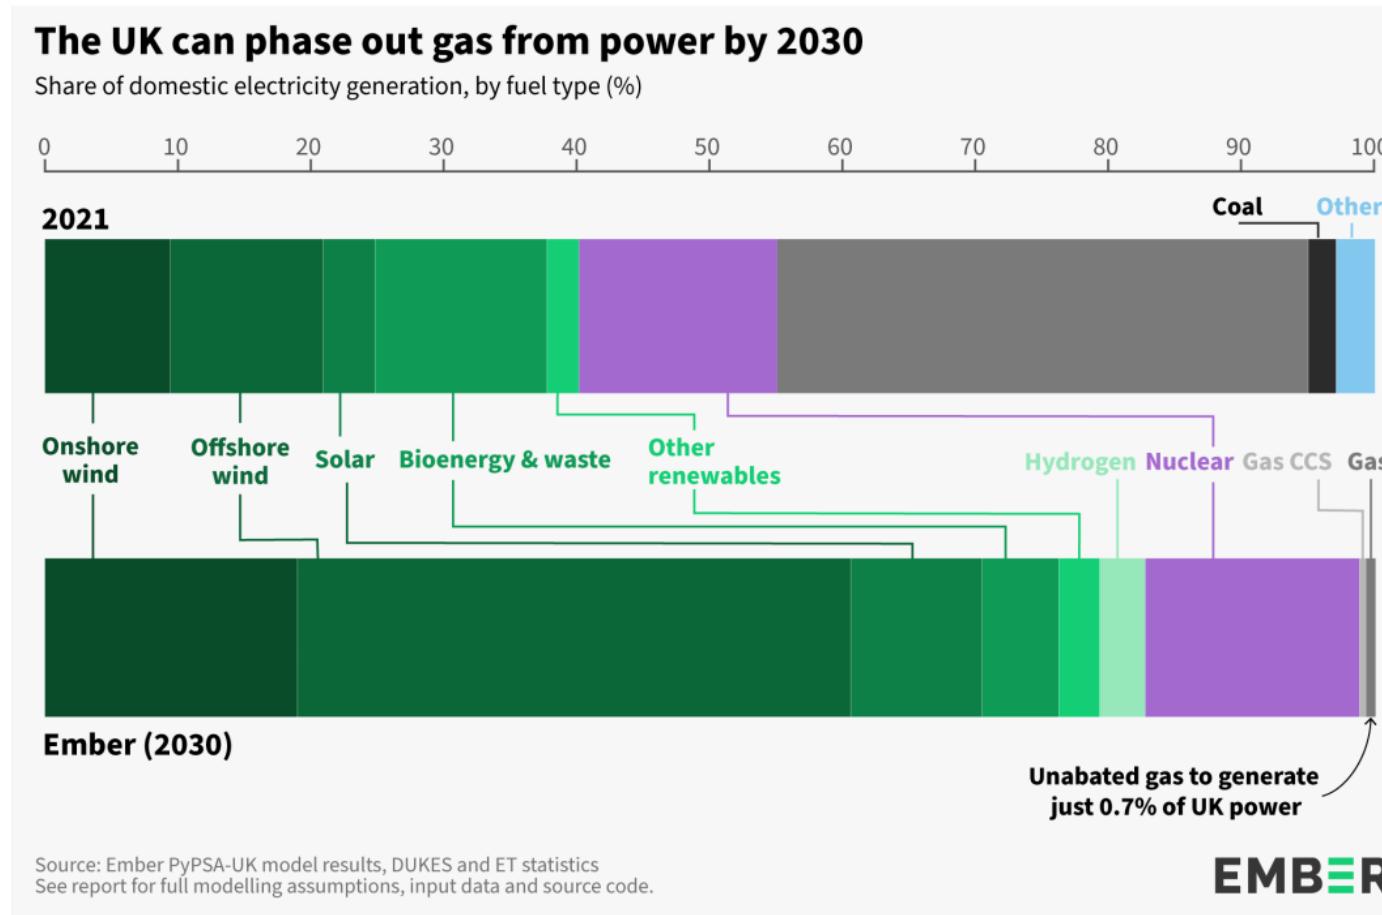

PyPSA is used worldwide by **dozens of research institutes and companies** (TU Delft, KIT, Shell, TSO TransnetBW, TERI, Agora Energiewende, RMI, Ember, Instrat, Fraunhofer ISE, Climate Analytics, DLR, FZJ, RLI, Saudi Aramco, Edison Energy, spire and many others). See [list of users](#).

# EXAMPLES

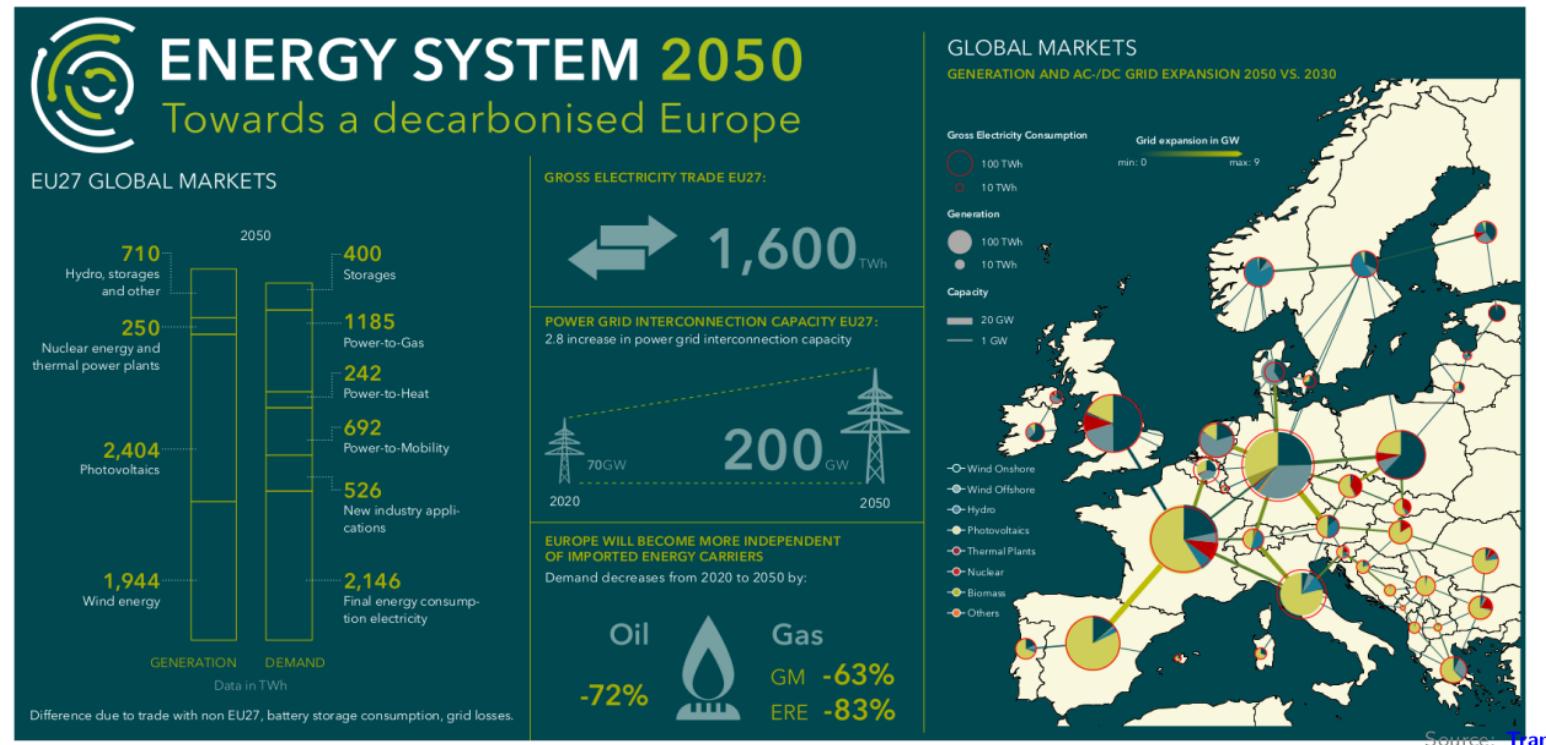

NGO Ember used PyPSA to model a gas phase out in the UK by 2030, releasing all code on [github](#).

# EXAMPLES

## PyPSA example: TransnetBW used PyPSA-Eur-Sec

German **Transmission System Operator (TSO) TransnetBW** used an open model (PyPSA-Eur-Sec) to model the European energy system in 2050. Why? Easier to build on an existing model than reinvent the wheel.

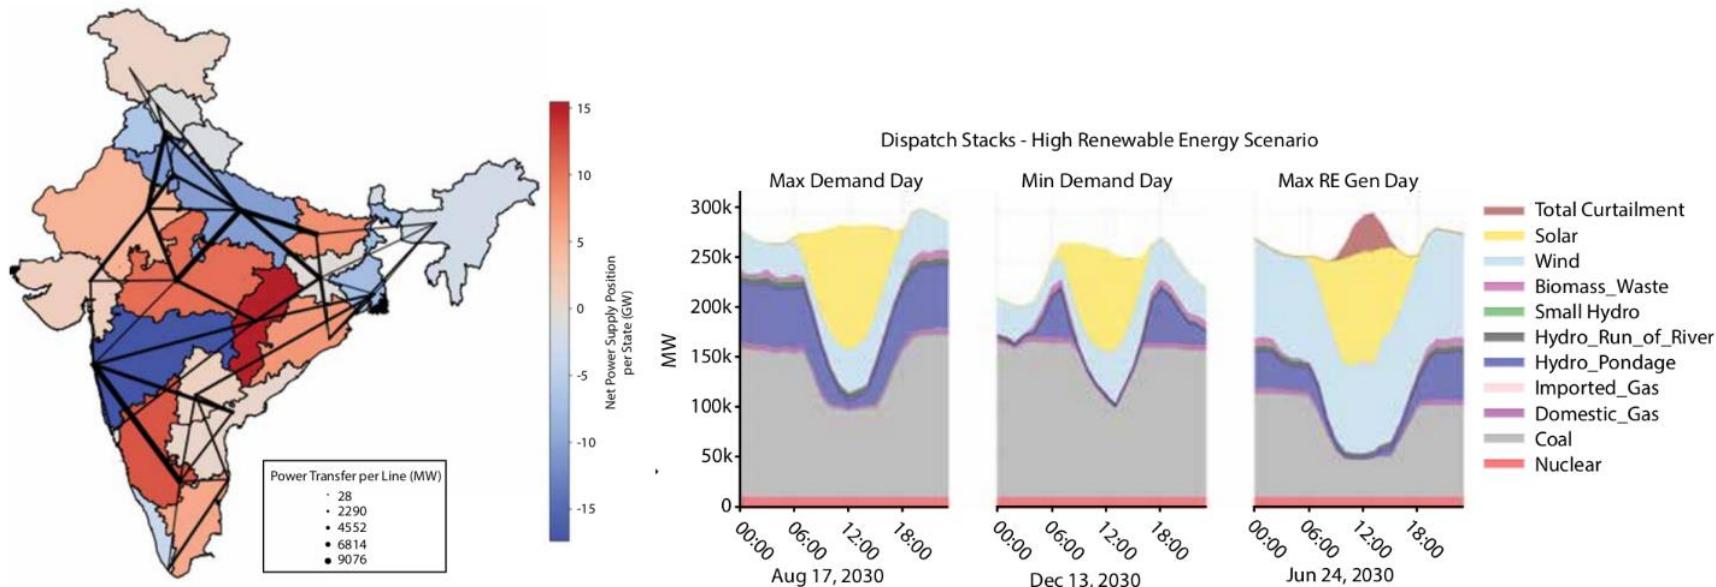

# EXAMPLES

## PyPSA example: TERI in India

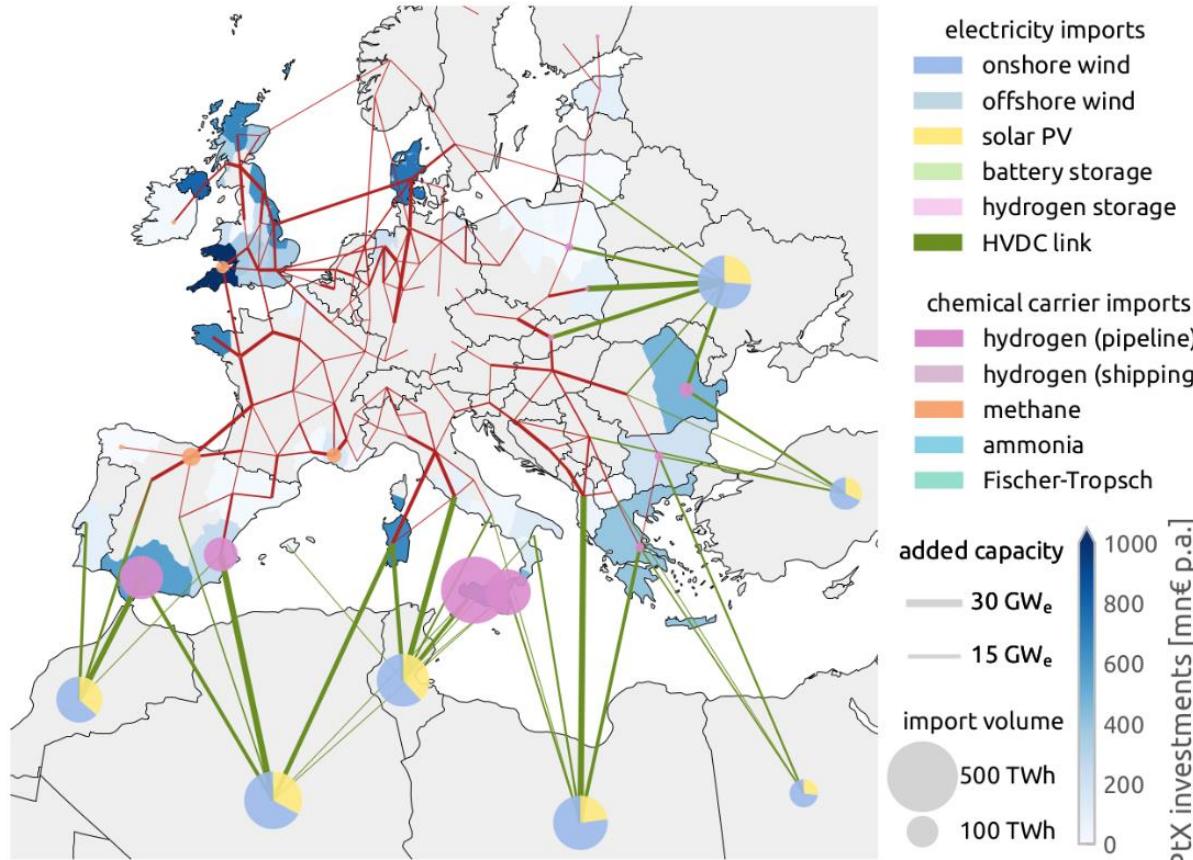

For a government-backed study of India's power system in 2030, The Energy and Resources Institute (TERI) in New Delhi used open framework PyPSA. Why? **Easy to customize**, lower cost than commercial alternatives like PLEXOS, good for building up skills and reproducible by other stakeholders.

# EXAMPLES

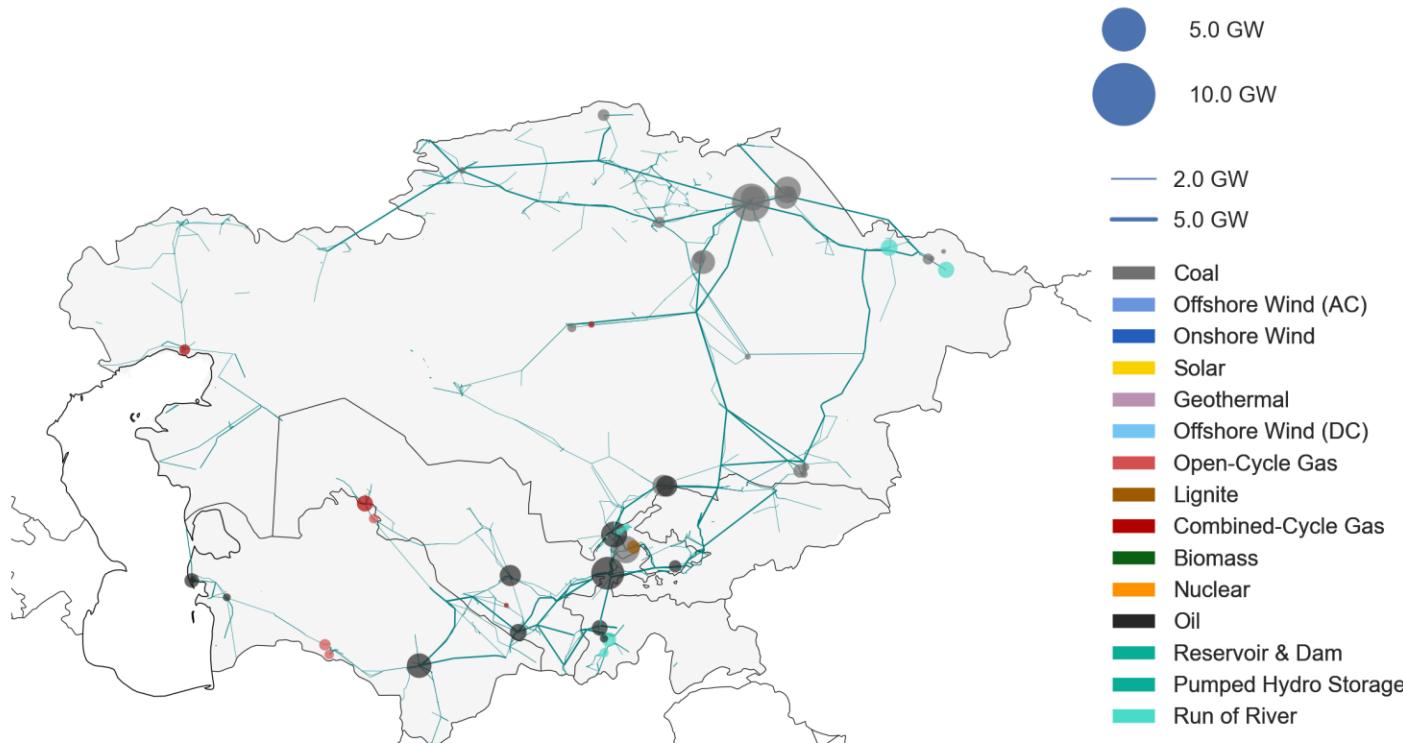

## With e-fuel imports instead of autarky

- Allowing imports of electricity, green hydrogen, e-fuels, **changes infrastructure needs completely**
- PtX out-sourced from Europe
- Electricity imported too, providing seasonal balancing

# EXAMPLES

**NGO Agora Energiewende** uses PyPSA-Earth for exploring viable renewable energy systems in Kazakhstan. Why? It's cheaper, benefits of transparency, **support is available**, and long-term sustainable since **people can reuse** and **build up on existing work**.

# PyPSA-EARTH

## 1 MODEL + 1 EARTH COMMUNITY

---

*"Model your province, your country, your continent or the whole planet in one model"*

*"Accelerate innovation/time, support quality, make meaningful impact"*

# PART III. PyPSA & PyPSA meets Earth

### FRAMEWORK AND MODELS FOR ENERGY SYSTEM MODELLING

- PyPSA**  
A python software toolbox for simulating and optimising modern power systems.  
  
[Documentation](#) | [Source Code](#)  
Category: Framework  
Maintained: pypsa.org
- PyPSA-Eur**  
An open optimisation model of the European transmission system.  
  
[Documentation](#) | [Source Code](#)  
Category: Model  
Maintained: pypsa.org
- PyPSA-Eur-Sec**  
A sector-coupled open optimisation model of the European energy system.  
  
[Documentation](#) | [Source Code](#)  
Category: Model  
Maintained: pypsa.org
- PyPSA-Earth**  
A flexible open sector-coupled optimization model of the global energy system.  
  
[Documentation](#) | [Source Code](#)  
Category: Model  
Maintained: pypsa-meets-earth
- Model.Scenarios**  
An online toolkit for running and exploring PyPSA-Eur-Sec scenarios.  
  
[Documentation](#) | [Source Code](#)  
Category: Model+Front-End  
Maintained: pypsa.org
- Model.Energy**  
An online toolkit for calculating renewable electricity supplies around the world.  
  
[Documentation](#) | [Source Code](#)  
Category: Model+Front-End  
Maintained: pypsa.org

### OPEN COMMUNITY

- Check out our Discord server**  
The heart of the community life is happening on Discord (which we describe as better Slack alternative). We hold there all our meetings, coffee breaks and exchanges. Discord provides voice channels, text channels, and event stages. This also allows you to meet up or host your own events if desired.  
  
Maintained: pypsa-meets-earth
- Check out our GitHub Repository**  
You can find our developments in the GitHub repository, where you can join our community, create issues, share ideas and discuss with us. All of our developments are open source and GPL3 or MIT licensed, meaning they must stay open. Even the website you are looking at is open source. Feel free to use it and suggest improvements.  
  
Maintained: pypsa-meets-earth
- Check out our Documentation**  
The documentation describes in more detail how you can contribute, how our project is structured and further provides the code documentation. Additionally, we share learning materials and some relevant talks and papers in the roan of PyPSA and Earth modelling. The documentation is also open, feel free to make it better.  
  
Welcome to the PyPSA meets Africa documentation!

### DATA FOR ENERGY SYSTEM MODELLING

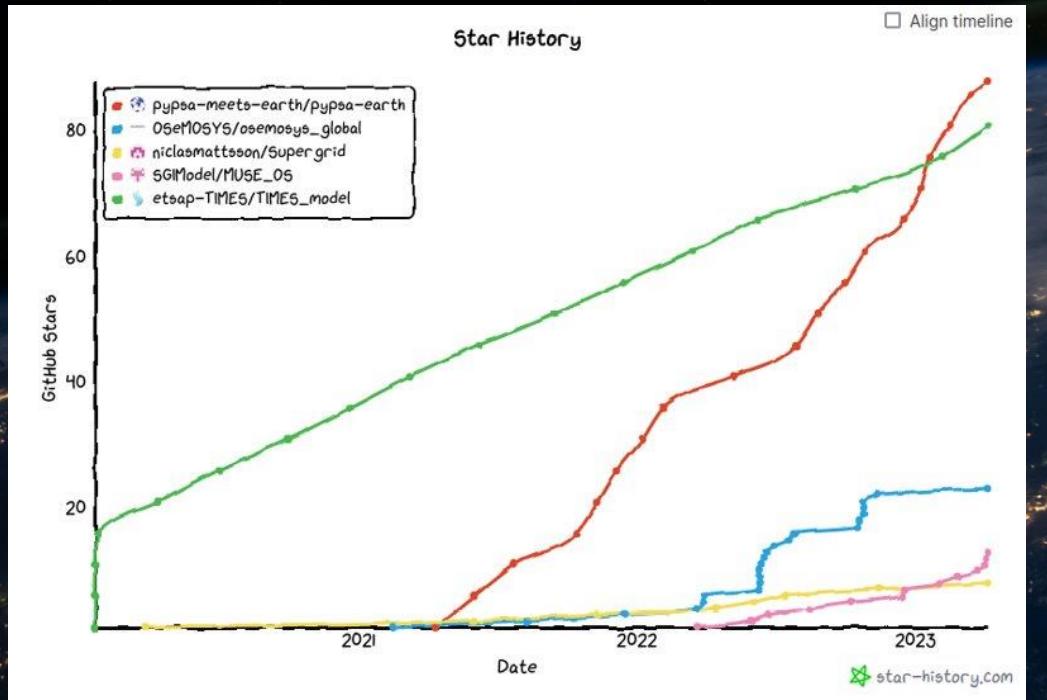

- Atlite**  
Convert weather data to energy systems data.  
  
[Documentation](#) | [Source Code](#)  
Category: Data  
Maintained: pypsa.org
- pydemand**  
A machine learning toolbox to create demand-timeseries in subnational resolution.  
  
[Documentation](#) | [Source Code](#)  
Category: Data  
Maintained: pypsa-meets-earth
- Detect-Infra**  
A machine learning pipeline to detect infrastructure from satellite images.  
  
[Source Code](#)  
Category: Data  
Maintained: pypsa-meets-earth
- Powerplantmatching**  
A toolbox to combine multiple powerplant databases.  
  
[Documentation](#) | [Source Code](#)  
Category: Data  
Maintained: pypsa.org
- Technology Data**  
A tool that compiles assumptions on energy system technologies.  
  
[Documentation](#) | [Source Code](#)  
Category: Data  
Maintained: pypsa.org

### OPEN SOURCE SOLVER INTERFACES AND SUPPORT

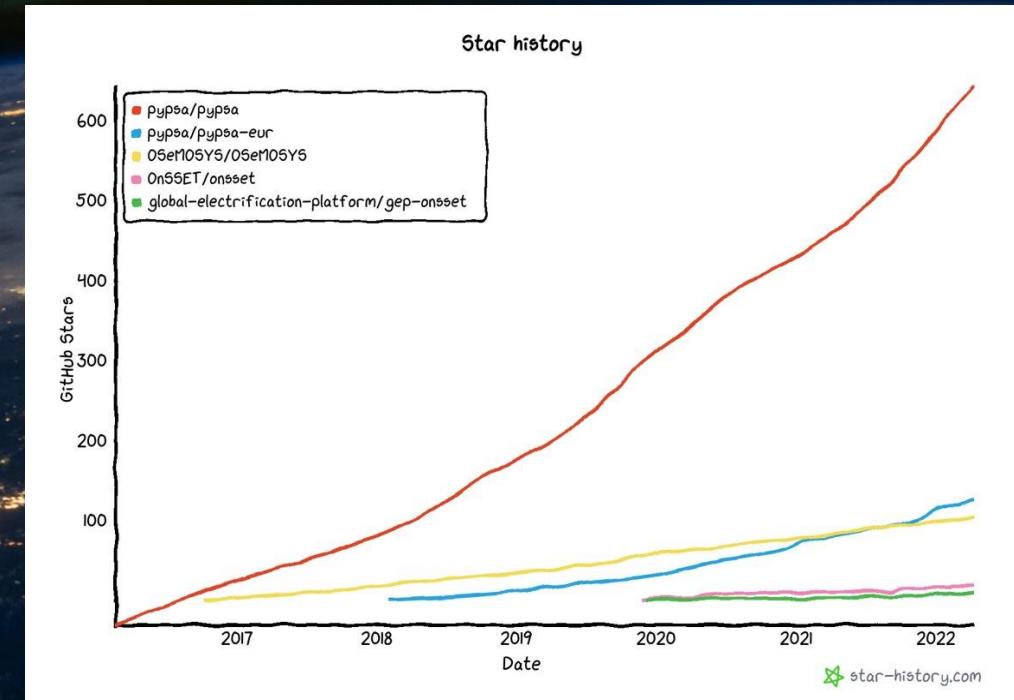

- Linopy**  
Linear optimization interface for Python.  
  
[Documentation](#) | [Source Code](#)  
Category: Solver Interface  
Maintained: pypsa.org
- HIGHS-campaign**  
We organised a campaign, collecting +500k, to make the worlds-fastest open-source solver HIGHS ready for large energy planning problems.  
  
[Public Proposal](#) | [Source Code](#)  
Category: Campaign  
Lead by: pypsa-meets-earth

TABLE III  
A COMPARISON OF SELECTED FEATURES OF SELECTED SOFTWARE TOOLS THAT ARE SIMILAR TO PYPSA.

# PART IV. Summary

# SUMMARY

- Open data and software is **essential** for decision-making
- Open solutions are **trusted** by industry & research
- Open and active **community** is key

## BE CAREFUL, CONSIDERED OPEN BUT TROUBLEMAKERS:

- **Inactive user/ development community (e.g. TIMES, IRENA)**
- **Licenses to run the software (e.g. GAMS/Matlab based tools)**
- **Tools with missing features for study purpose**
- **Tools that come without data/ non-evolving data**

# Thank you for listening 'n' stay open.

# AI 'n' Digital Twins for Net-Zero Planning

Scalable Infrastructure Monitoring from Satellites

## PROBLEM

- **Energy system planning** requires better data

## SOLUTION

- **AI object detection** map infrastructure updates

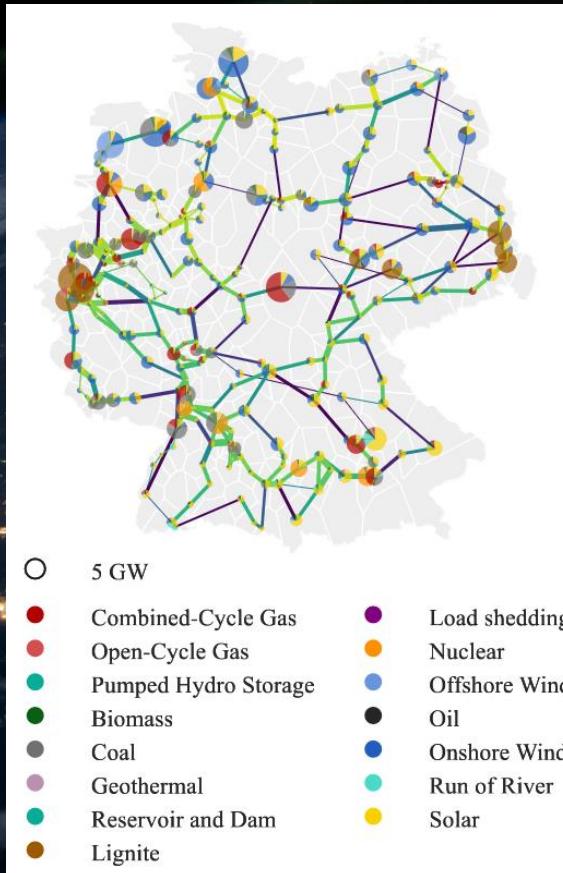

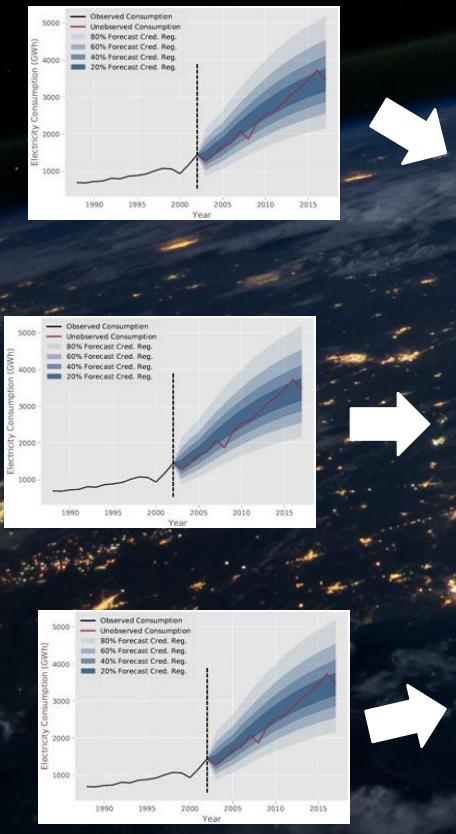

## IMPACT

- **Faster and better** energy system planning
- **Accelerated** renewable energy expansion
- **More affordable** electricity and energy
- **Reduction** of CO<sub>2</sub> emissions
- **Solution** global useful and improving over time

**USERS:** UoE, GE, NationalGrid, SSE, UK Gov, ...

# AI 'n' Digital Twins for Net-Zero Planning

## Intelligent Demand Prediction

### PROBLEM

- **Energy system planning** in EU based on poor demand data

### SOLUTION

- **AI prediction** of electricity demand with big data

### IMPACT

- **Faster and better** energy system planning
- **Accelerated** renewable energy expansion
- **More affordable** electricity and energy
- **Reduction** of CO<sub>2</sub> emissions
- **Solution** global useful and improving over time

**USERS:** UoE, GE, NationalGrid, SSE, UK Gov, ...

YOU ARE ONLY COOL IF  
YOU USE/CONTRIBUTE TO
